

## THE SAFEST TAP OF ALL

- Our Worldwide patented biometric technology provides the safest method of dispensing near boiling water from our range of Hot water taps.
- If you're not registered, you can't dispense!
- Registering takes seconds & is easy to do, each system can register up to 30 users.
- Designed in the UK & crafted using quality materials constructed to the highest standards & certified to the relevant standards.
- Whilst most systems on the market are safer than using a kettle there is still the chance, once learnt, that minors can operate them!
- Our system is easy to operate, just present a registered finger to instantly dispense, once your finger is removed from the sensor the system instantly stops dispensing.
- You can be assured that unsupervised inquisitive children can safely operate the standard domestic hot and cold tap functions, knowing they will not have access to near boiling water.
